#### ABSTRACT

This financial report of the New Jersey community colleges is organized around a series of five topics: (1) costs and enrollments; (2) allocation of resources; (3) sources of revenue; (4) enrollment profile and output measures; (5) facilities and capital data. Each of the five sections contains quantative data from budget projections submitted by the colleges for fiscal year 1975-76 and prior years. State aid to the community colleges actually supports a full-time equivalent (FTE) student count 3 percent below the exrollment projections of the colleges. In 1974-75, in addition, there was a major discrepancy between the high actual enrollments at the colleges (60,257 FTE) and the original projections of the colleges (57,656). Latest estimates of enrollment for 1975-76 are for \$6,400 FTE. However, because of state imposed FTE limitations, and elimination of the conventional state reimbursement mechanism for overenrollments, the colleges will only receive state funding for 53,129 FTE. There will be, however, a marked increase in other sources of funds, including federal, county, industry, and private. The increased enrollment appears to be part of a general pattern of overall growth in college attendance as an alternative to employment because of a scarcity of jobs. Detailed financial data are tabulated and appended. (Author/NHM)

Documents acquired by ERIC include many informal unpublished \* materials not available from other sources. ERIC makes every effort to obtain the best copy available. Nevertheless, items of marginal reproducibility are often encountered and this affects the quality of the microfiche and hardcopy reproductions ERIC makes available via the ERIC Document Reproduction Service (EDRS). EDRS is not responsible for the quality of the original document. Reproductions supplied by EDRS are the best that can be made from the original.

#### <u>INTRODUCTION</u>

The Board of Higher Education is charged by law with allocating state appropriations to community colleges. This report was/prepared by the Offices of Budget & Fiscal Planning and Community College Programs, Department of Higher Education as background information for the Board. In the past this report has been published at the beginning of the fiscal year, concurrently with the Board's allocation of state aid to community colleges. This year, FY 1975-76, the total dollars available for state aid were not known until early July. The colleges have recalculated their budgets, based upon the reduced level of state aid support. This report is based upon the colleges' revised budgets as submitted to the Department this fall. The budgets are presented in a format prescribed by the General Accounting and Procedures Manual for State Supported County Colleges. Other sources of data include the Department of Community Affairs, and the Office of Facilities Planning and Construction, Department of Higher Education.

This report summarizes selected financial and other data describing the fiscal operation of community colleges as projected for FY 1975-76. This report discusses such matters as the relationsh of cost increases to enrollment growth and the various patterns of internal resource allocation. Where appropriate, non-financial data is used to provide the report with context and meaning.

If should be noted that per FTE cost information in this report is based upon the colleges original enrollment projections of

57,656 FTE's, despite the fact that state aid was only appropriated for 53,129 FTE's. Since projected actual enrollments are larger than the original budget projections, per FTE costs are higher than they would be if actual enrollments were used.

The community college financial report is organized around a series of topics. Each of the six sections that follows contains quantitative data from budget projections submitted by the colleges for FY 1975-76 and prior years. Statistical tables and a narrative highlight interpret significant patterns. These patterns, rather than any single statistic, should be weighted by the reader in drawing conclusions from the data.

The six sections of the report are:

- I. Costs and Enrollments in Perspective
- II. Allocation of Resources
- III. Sources of Revenue 🥷
- IV. Enrollment Profile and Output Measures
  - V. Facilities and Capital Data
- VI. Summary of Major Findings

#### I. Costs and Enrollments in Perspective

In many ways, fiscal year 1975-76 has been an extraordinary one for the community colleges. Because state revenue projections fell short of projected expenditures, and because the constitution requires the State to maintain a balanced budget, severe cutbacks were effected in the state budget in the FY 76 Appropriations Act. This had a particular bearing on the community colleges, where, for the first time, college enrollment projections were reduced for the purpose of state aid support. Although the level of state funding remained constant at \$600 per FTE, the number of FTE's actually funded by the State fell short of those that the colleges originally projected to enroll by 4,549 FTE or 8.6%

In past years, colleges could reasonably anticipate the level of state support in February, prior to the beginning of the fiscal year in July. This year, the colleges did not know their allocations until mid-July. This delay was caused by the fact that the Governor was forced to line-item veto many budget items, including the state aid account, during the last week in June. A supplemental appropriation them restored the reduction in the state aid account in mid-July. As a result, the colleges did not have working budgets until well after the beginning of the fiscal year.

The colleges' actual enrollments in the fall of 1975 are up significantly from those originally projected. This reflects a national phenomenon whereby many people unable to secure employment, have elected to return to college. Colleges are educating more students than anticipated. This further aggravated an already difficult fiscal situation in the current year. Projected actual FTE's for FY 76 are 66,399, compared to 57,656 FTE's originally

projected by the college, and 53,129 FTE's actually funded in the FY 76 state budget. Projected actual enrollments for FY 76 are 25% higher than the budgeted enrollments.

A perspective on FY 75-76 can be obtained from looking at Graphs A and B. From Graph A, it can be seen that budgeted enrollments are rising after a two-year period of more limited growth. The projected enrollment growth based on the original projections for FY 76 is 11% as compared with 2% for FY 75, and 7% in FY 74. Enrollment growth at the community colleges as shown in Graph A seems to show a pattern of a sharp increase followed by a leveling off, followed by an increase again. Since operating costs are directly influenced by both enrollment and inflation, and since both of these factors are increasing at a substantial rate, it is not surprising that total budgets are projected to increase

Graph B displays the same data in a different format. As can be seen from Graph B, after moderate annual increases through 1973, the budgeted cost per FTE rose sharply from FY 73 to FY 75, and has now returned to a moderate increase for FY 76. It should be noted that the median budgeted cost per FTE increased 11% from FY 73 to FY 74, 10% from FY 74 to FY 75, but only 3% from FY 75 to FY 76. This pattern is primarily the result of the temporary leveling of budgeted enrollment growth in FY 74 and FY 75, followed by a significant projected increase in budgeted enrollment for FY 76. It appears that the entry of more students into the community college system continues to produce economies of scale.

by 17% in FY 76.

A cost factor which continues to influence all incetutions of higher education is the rising cost of maintaining and operating the physical plant, particularly the cost of fuel and utilities.

For: FY 76 the community colleges project an increase of 34% in physic plant operating costs over the previous year. This is one and one-half times greater than the 14% increase in other areas of the budget. Physical plant operating costs continue to rise as a percentage of the total college budget. The median percentage for FY 76 is projected to be 14.9%. This compares with 12.9% in the prior year.

The overall 17% increase in systemwide college operating costs is attributable to three factors:

- 1. An 11% increase in budgeted student enrollments according to the original projections;
- 2. Continuing erosion of the buying power of the dollar due to inflation;
- 3. The significant increase in costs related to the maintenance and operation of the physical plant.

Despite these general statements, there is a wide range in costs among the colleges as can be seen on the following page:

FY 76 Education and General Budget/Projected Enrollment (Table 2)

High - Essex \$12,071,359 - 6,600 FTE

Median - \$5,410,642 - 3,086 FTE

Low - Hudson \$50,205 - 600 FTE

These statistics reflect the range of both total budgets and enrollments among the dommunity colleges.

2. Percent Increase in Education and General Budget - FY 75 to FY 76

High - Salem 51.9% 15.8% Low Bergen 8.7%

Although all colleges project significant increases in operating costs, there is wide variation among the colleges in projected increases.

3. Cost Per FTE - FY 76 (Table 2)

High - Passaic \$2,673
Median - \$1,800
Low - Morris \$1,645

Per student costs reflect several variables including student/faculty ratios, mix of students, geographic location, size of physical plant, economies of scale, etc.

4. Percent Change in Cost Per FTE - FY 75 to FY 76 (Table 4)

High - Salem +32.4% Median + 7.4% Low - Gloucester -4.9%

The percentage increase in the cost per FTE reflects the relationship between changes in operating costs and changes in enrollment. Where the differential is greatest (i.e., costs rising more rapidly than enrollments), the increase in cost per FTE will be greatest.

Although in past years, there has been a correlation between enrollment growth and cost per student, for FY 76, as can be seen from Table 3, that relationship no longer exists. Those colleges which have the largest increases in enrollment (i.e., Somerset, Burlington, Union) do not necessarily project the largest increases in costs. Nor does it follow that those institutions with the smallest increases in enrollment (i.e., Atlantic, Brookdale, and Camden) will necessarily have the smallest increases in cost. Clearly, cost increases are a function of variables other than enrollment.

Finally, it should be noted that an additional institution has been added to the ranks of New Jersey's community colleges in FY 76, bringing the total number of institutions to 18. The Hudson County Community College Commission (H.C.C.C.C.) which opened in the spring of 1975, will function in Hudson County in the same way as a community college. Hudson County Community College Commission budget data should be interpreted with caution, since in many cases it is not precisely comparable to that of the other institutions. 1

Because it has no land and buildings, and no faculty of its own, the Commission will contract for educational services at neighboring institutions of Jersey City State College, St. Peters College, and Stevens Institute of Technology. The Commission is in the process of developing its own academic programs, for which it will eventually grant the Associate degree. This unique arrangement enables Hudson County to provide a community college education for its residents thus ending the need for them to go out of county.

#### Section II - Allocation of Resources

Educational and General expenditures examined in total in the previous section takes be classified in the following major expenditute categories:

- 1. Instruction
- 2. Library
- 3. Physical Plant
- 4. Administration, General Expenses, and All Other

This section will examine these four major expenditure categories in terms of cost variables and their relative impact on total operating costs.

#### Instruction

The cost of instruction is the largest operating budget expenditure. Of the total \$106 million combined community college operating but s for FY 1976, approximately 46% or \$50 million is projected for instructional costs. Expenditures for instruction per full-time equated student range from a low of \$756 at Burlington to a high of \$1,242 at Union County Technical Institute (Table 6). The range in cost reflects several factors including average faculty salaries, the mix of full-time and part-time faculty (Table 7) and the student faculty ratio (Table 8), and the relative mix of career and liberal arts students.

There appears to be a correlation between the budgeted cost per student and the relative mix of career and transfer students. It is generally accepted that career programs are more expensive on a cost per student basis because of a number of factors including the greater imput of faculty resources as reflected in lower student/ faculty ratios, and the greater use of laboratory instruction.

13

#### Library

Expenditures for books and periodicals, media services and equipment, and reader services are aggregated under the general category of library or learning resources expenditures. Expenditures for learning resources account for 5.6% or approximately \$6 million systemwide. Table 9 summarizes projected library expenditures for each college.

institutions which place a strong emphasis on selfinstruction rely heavily on the use of audio-visual media or "learning In these institutions, students learn at an individualized page with the assistance of audio-visual material. Faculty serve as coordinators to insure that students are effectively using "learning In these institutions, less is budgeted for faculty and resources". related faculty support costs, while a relatively larger investment is, made in media services, equipment, and materials. These costs are included under the library expenditure category. Burlington and Brookdale, which place a heavy emphasis on self-instruction, project expenditures for library above the median while projecting expenditures for instruction below the systemwide median: in the data below:

#### Percent of Total Budget

Burlington Brookdale Median	/	41.88 40.69 49.98	•	9.6% /10.6%	· ,
Median		1 %	``````````````````````````````````````	;	

ERIC Full Text Provided by ERIC

### Physical Plant

projected expenditures for the operation and maintenance of facilities total \$16 million or approximately 15% of total operating costs. Physical plant operating costs have risen steadily on a percentage basis in recent years reflecting both the increase in size of facilities as well as significant increases in the cost of fuel and utilities. Expenditures for physical plant operation are particularly sensitive to general inflationary pressures and represent a significant cost of higher education.

projected total expenditures and cost per square foot are summarized in Table 10. On a cost per square foot basis, the budgeted median cost per square foot is \$3.25 or an increase of approximately 19% over the prior year. The range in cost per square foot among the colleges reflects the influence of geographic location on wages and the cost of materials and supplies, and the age and type of facilities.

Budgeted Co	ost Per Square	Foot
High .	\$4.60	Camden
Low .	\$2.11	Essex
Median	\$3.26	Morris

### Administration and General Expense

General operating costs not included in instruction, library, or physical plant have been aggregated under this category for the purpose of analysis. Included in this category are such costs as student counseling, fringe benefits, postage, general administrative salaries, and computers. As summarized in Table 12, projected costs, for Administration and General Expense represent 30% or approximately

\$33 million systemwide. Because of the diverse activities included in this category, reasons for differences in the cost per student are extremely difficult to isolate and identify. Computer expenditures have been summarized separately in Table 11 which shows the percent of total expenditures, allocated to instructional and academic uses.

The following is a breakdown of the four expenditure categories in median percentage terms.

### Systemwide Median

•	·è	1						
	N	<u>FY 1</u>	9 <u>73-7</u>	<u>4</u> <u>F</u>	Y 1974-	75	FY 1975-7	76

Administration	& General	1	29	•	30	,	30	
Expensé		•			<del></del>		,—	
•	,		100%		100%		100%	

More detailed analysis of projected expenditures is contained in charts at the end of the report. The percentage distribution of expenditures among colleges is illustrated in Table 5. Tables 6, 9, 10, and 12 are a more detailed analysis of four expenditure categories. Since accounting practices vary to some extent among colleges, similar activities may be budgeted under different expenditure categories at different institutions. Comparisons therefore based on the data from Tables, 6, 9, 10, and 12 may be slightly distorted.

#### Section III - Sources of Revenue

Community colleges of New Jersey are funded primarily from three sources: namely, county appropriations, state aid, and tuition and fees. By Board of Higher Education resolution, community colleges are permitted to charge no more than \$400 per year for tuition. This policy has resulted in a range of tuition from \$300 to \$400 a year, for full-time students. Due to rising costs and reduced state aid, several colleges have increased their tuition this year to the maximum of \$400 set by the Board. As can be seen from Table 16, 12 of the 18 colleges are now at this maximum level, an increase of 3 from .

FY 75. Although the tuition rate at several colleges has increased, tuition as a percent of total revenue has remained relatively a constant at 24% for the last five years. Tuition charged by the county colleges is less than that charged at other New Jersey public institutions, and considerably less than the tuition charged at private colleges and universities.

In most states, the dollars constituting the public share of community college funding are derived from a partnership arrangement between State and County. There are three primary types of State-County partnership. In the majority of states, state aid is allocated according to a fixed percentage of the budgets of the colleges. Other states contribute a flat dollar grant to each college. A few states contribute a basic "foundation" grant to each college, in which case, the state funding serves to even out inequities in community college funding levels from county to county.

17

-74-

In New Jersey, the legislation providing state aid to community colleges operates as an example of the "flat grant" model. By law, colleges may receive 50% of operating costs up to a maximum of \$600 per FTE. Since operating costs at all colleges exceed \$1,200 per FTE, the state provides the fixed grant of \$600 per FTE. As can be seen from Graph C, this has been the case during the five year period shown. Graph D displays the distribution of support dollars for FY 75 only.

Having observed revenue patterns in the aggregate, it is of value to notice variations from college to college. Tables 2 and 14 show the cost per FTE and the percengage of operating income contributed by counties. Where costs per FTE have been traditionally high, the county has committed proportionately more resources. Colleges that have the highest per FTE costs - Camden, Passaic, and Somerset - receive a significantly higher percentage contribution from their respective counties. Where costs per FTE have been historically low - Morris and Union - the county contribution is relatively low.

Another measure of the level of county support can be observed in Table 15. This table illustrates that the county colleges are having mixed success in maintaining their proportionate share of the county budget. As can be seen from Column 2, of the 15 counties represented for the two year period, eight have increased their percentage of the county tax for 1975 over the calendar year 1974. It is important to note that, although only two of the colleges suffered a decline in per capita support (Column 3), almost half of the colleges experienced a decline in their relative share of county tax resources. The following is a comparison of sources of perating income for the fiscal years 1972-73 to 1975-76.

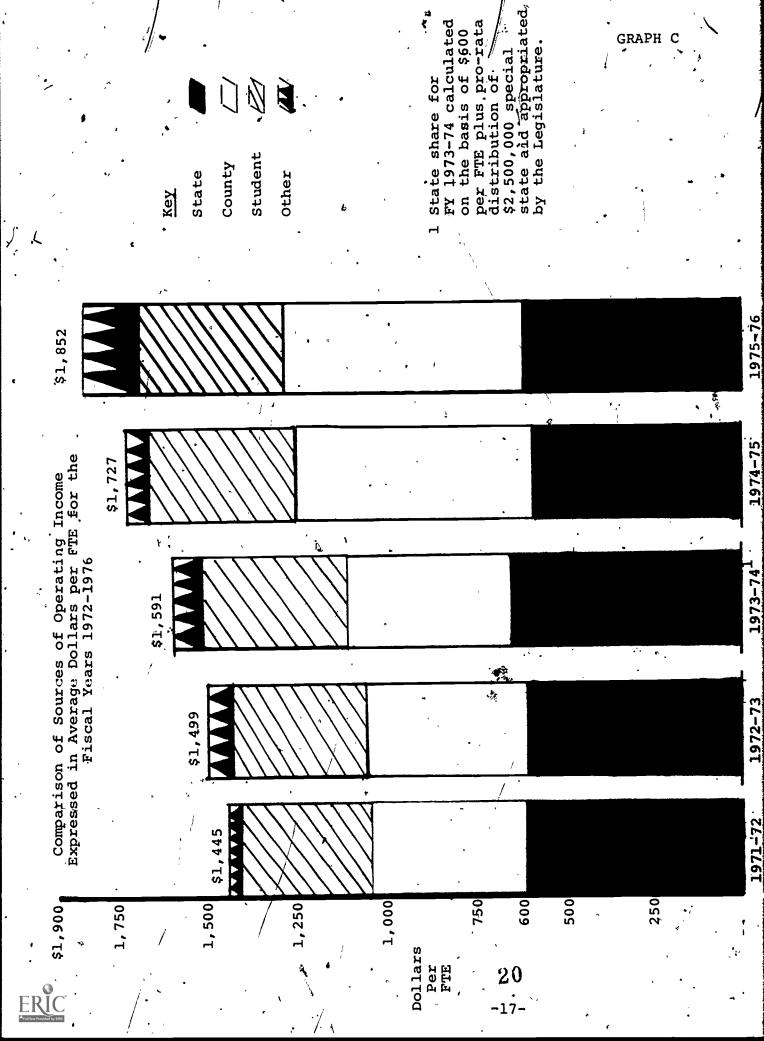

# Percentage Contribution From Each Source by Year

	FY 1972-73	FY 1973-74	FY 1974-75 <sup>1</sup>	Projected FY 1975-76
State	40%	40%	34%	30%
County	. 30%	28%	37%	. 37%
Student	26%	26%	25%	.25%
Other $\frac{2}{}$	4%	6%	48	88

These figures include a special State appropriation of \$2.5 million for FY 1973-74. State share would have been approximately 37% and other components would have been slightly more had this special appropriation not been made.

As can be seen, there has been a marked increase in other sources of funds including federal, industry, and gifts and grants.

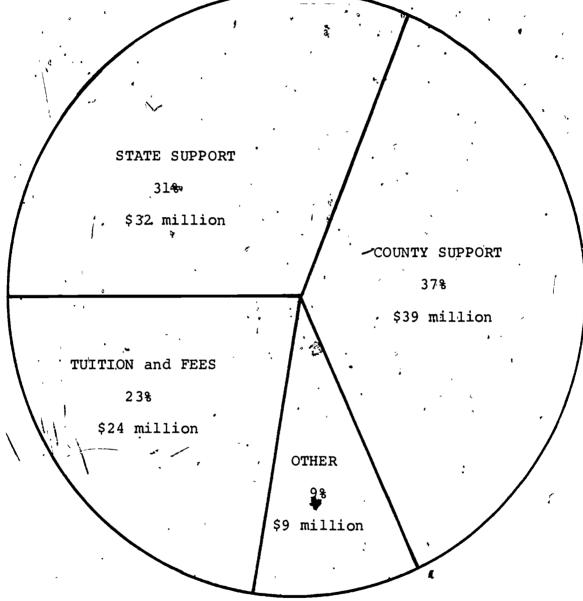

WHERE THE DOLLARS COME FROM:

COMMUNITY COLLEGE SOURCES OF REVENUE

FY 1975-1976

Projected

#### Section IV - Enrollment and Outputs

This section will deal with the "outputs" of community colleges by considering the following questions:

- What is the student profile in terms of full-time and part-time students? (Table 17)
- What is the student mix in terms of career and transfer students?
- What do students receive from the college in terms of credits and degrees? (Tables 18 and 19)

These questions do not reflect the qualitative aspects of a student's experience in college. As in any educational experience, there are non-quantifiable functions relating to community service activities and "non-credit" instruction. In an attempt to specify these qualitative aspects of a student's education, national organizations, such as the Western Interstate Commission on Higher Education (WICHE), are attempting to develop additional "output measures". Until these measures are defined and accepted, most colleges, by common convention, use the measures for student enrollment and "output" cited above.

Two major trends are evident in the mix of students attending

New Jersey community colleges. The first is the increase in part-time
enrollment observed over the last two years is continuing at
approximately the same rate. (Table 17) As can be seen from the
chart below, in FY 1976 part-time enrollment continues to increase
at a significant rate (15.8%). Full-time enrollment however
decreased.

.	Chang	es in Enrollm	eat	
	Full-Time a	nd Part-Time	Students //	
:	FY 75	. <b>PY</b> 76	Percent Change #Y 1975 to FY 1976	
Full-Time	33,512	37,651	+ 118	
Part-Time	86,451	100,939	+ 17%	

Another trend of interest is the mix of career and transfer students. The majority of community college students are enrolled in liberal arts programs rather than career-oriented programs. However, the percentage of students enrolled in career-briented programs has increased over the previous year. As can be seen in the chart below, 35.2% of the students are enrolled in career programs, compared to 34.8% last year.

# FTE Enrollment by Program Mix Compared in Percentage Terms

•	Caree'r	Liberal Arts		Undesignated
FY 75	34.8%	37.7%		27.5%
f FY · 76	35.2%	35.7	. \	· 29.1%

The increased demand for part-time education and career-oriented programs is characteristic of a national trend among students which questions the value of a full-time four-year liberal arts education. However, the general economy may also be a significant influence in determining enrollment patterns for this year. High unemployment rates among four year college graduates may be shifting interest toward community college programs.

New Jersey community colleges offer three degrees: Associate Arts (A.A.), Associate in Science (A.S.), and Associate in Applied Science (A.A.S.). Tables 18 and 19 summarizing student credit hours and degrees granted provide a quantitative index of the workload and the "output" of the community colleges. Table 19 shows an increase in the number of A.S. and A.A.S. degrees awarded. Since the A.A.S. is awarded to students in career programs, this shift reflects the increasing preference for career-oriented education discussed earlier.

### Section V - Facilities and Capital

Facilities requirements are determined on the basis of enrollment projections. Space standards have been developed describing the amount of space required by a full-time student for several categories of space. Proposed new facilities are evaluated by the Department of Higher Education on the basis of these standards which establish both space and cost norms. The standards are contained in a publication entitled Facilities Planning Standards and Approval Procedures for New Jersey Public Colleges and Universities which sets forth a planning process for new facilities. It is intended that the procedures outlined in the manual will foster sound planning and design standards while at the same time monitoring and stimulating progress in the statewide construction program. All facilities programming takes place within the context of the New Jersey Master Plan for Higher Education.

Space planning guidelines vary according to the mission of the college. To date approximately 2.6 million net square feet of space has been constructed at New Jersey county colleges (Table 20)

Table 21 provides a summary of net assignable square feet per full-time student. Present utilization rates in general are high, with a median usage of 84. net assignable square feet per student. Based on current enrollment forecasts, space for an additional 7,000 students will be required by 1980. Any request for additional facilities, however, will be subjected to the most rigorous analysis in light of uncertainties regarding future student demand.

County colleges may receive state support for capital projects approved by the Board of Higher Education "in amounts not to exceed one-half of the costs of said capital projects". Capital funds have been authorized for construction of facilities, including fixed and moveable equipment. In addition, "minor capital" funds have been provided for initial acquisiton of library books, missellaneous office and instructional equipment, and construction or renovation projects of less than \$50,000 in support of expanding enrollments and hew instructional programs. No minor capital was funded by the State in FY 76, 'due to the State's fiscal situation.

Capital funding has been provided to community colleges from both the 1968 and 1971 Bond Issues, legislative appropriations, and under the provisions of "Chapter 12, PL 1971". Under this legislation, community college projects totaling \$245 million have been authorized by the Board of Higher Education since 1965 from the following sources:

Source (	Amount	(million	ıs)
Legislative Appropriations	\$ 30	/ 😘	,
1968 Bond Issue	\$' <b>4</b> 7	<i>y</i> ,	
1971 Bond Issue	\$\\28		
Chapter 12, PL 71	\$ 18	e E	
	\$123,	•	

The balance of \$120 million has been funded from the counties with some federal grant assistance.

Table 22 provides a summary by college of capital costs authorized to date. Table 23 provides a breakdown by fund source of capital authorizations to date.

It is important to note that all capital projects must be approved by the Board of Higher Education initially in concept and then twice more during the design stage. While \$34 million was tentatively allocated from the 1971 higher education bond issue, \$28 million has been authorized to date.

The capital tables have been upplemented with data on the worth of fixed assets at cost at each college (Table 24). These data are drawn from the audited college balance sheets as of June, 1974. Caution should be used in interpreting this data due to variations in college accounting practices.

#### Section VI - Summary

Two factors should be emphasized in summarizing this report. The first is that state aid to community colleges actually supports an FTE count 3% below the projection of the colleges themselves. For the first time colleges are facing state imposed FTE limitations and elimination of the conventional state reimbursement mechanism for overenrollments. Second, there is a major discrepancy between the high actual enrollments at county colleges last year (60,257 FTE) and the original projections of the colleges (57,656). Of necessity, the colleges original projections were based on early assessments and these did not anticipate the dramatic growth which occurred. Latest estimates of enrollment for this year suggest they will be as high as 66,400. Since the institutions will only receive state funding for 53,129 FTE, they are in a tight financial situation.

While FTE costs shown in the charts in this report reflect budgeted costs if the colleges limited their enrollments to their original projections, in fact actual FTE costs are much lower since colleges have enrolled many more students than were budgeted.

The increase in enrollments, together with the enrollment limitation for state aid (with no reimbursement) has caused a slight rise in the county share of support to the county colleges. The county share for FY 76 comprises 37% of the total, a 1% increase from last year. There is also a marked increase in other sources of funds including federal, industry and private.

Finally, while believed to be a temporary phenomenon, increased enrollments this year defied predictions of slowing growth. Part-time and occupational enrollment growth is still significant. Liberal arts enrollments are also growing. This appears to be part of a general pattern of overall growth in college attendance as an alternative to employment because of a scarcity of jobs.

Note: Student/faculty ratios are calculated as follows: The total number of full-time equated students divided by the total number of weighted faculty. The total number of credit hours of instruction, including summer session, and actual contact hour for non-credit courses are totaled and divided by thirty to arrive at a weighted number of students.

This table displays county support to college operating income as reflected by county tax appropriations to the college. The county purpose tax is displayed as a percentage of total county purpose taxes and on a per capita basis. It should be noted that these statistics do not reflect variations in the total county tax base, which would be indicative of the ability of the respective counties to support their various services. It should also be noted that these figures refer to calendar year rather than fiscal year.
